Practical 3

3. Build Your Virtual Private Cloud (VPC) and Launch a Web Server.

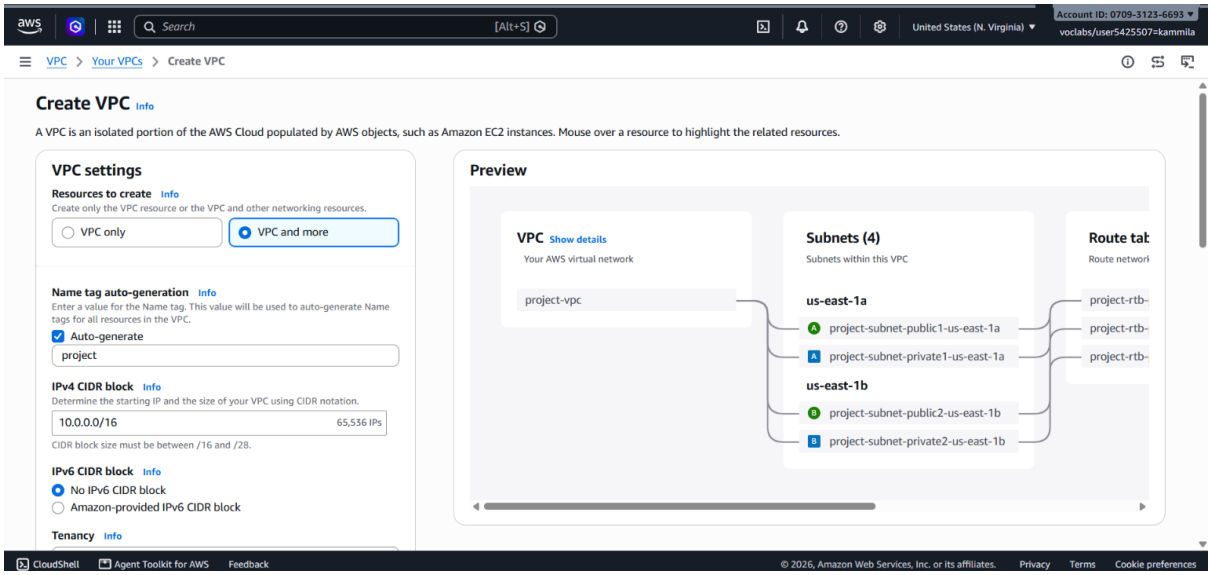

Step 1: Go To AWS dashboard and Search VPC

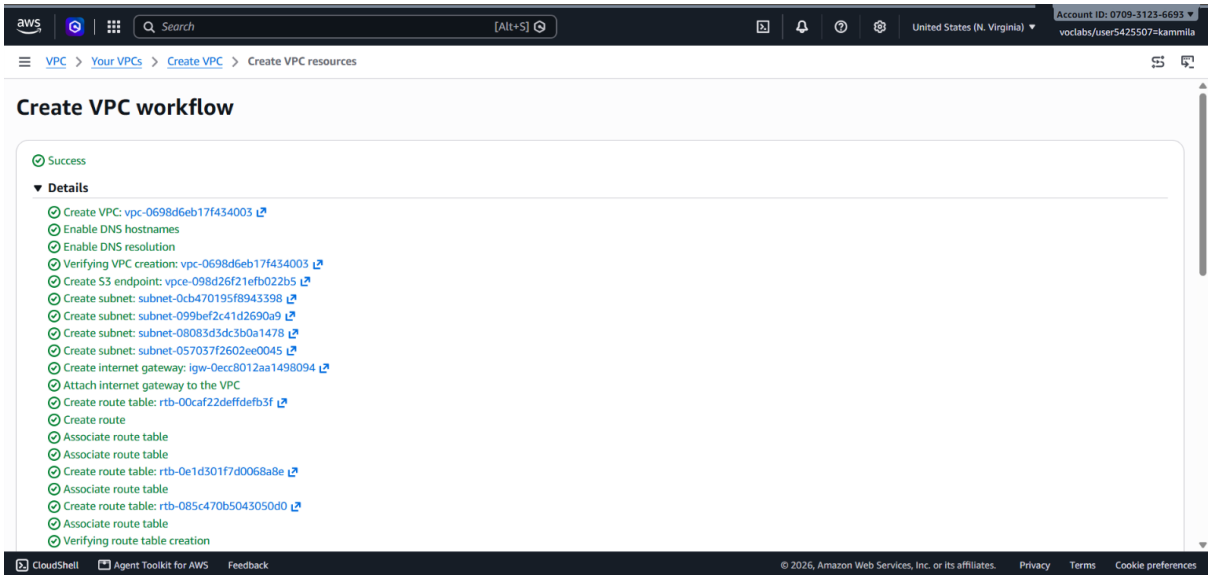

Step 2: Click On Create VPC

Step 3: Leave Everything as default And create vpc

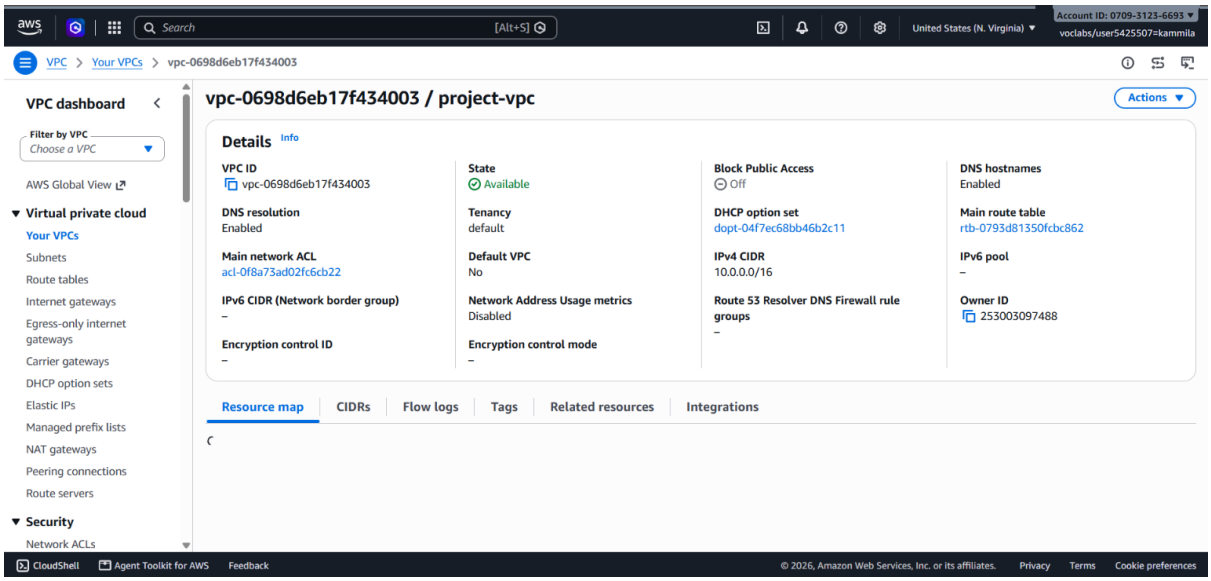

Step 4: The VPC Workflow

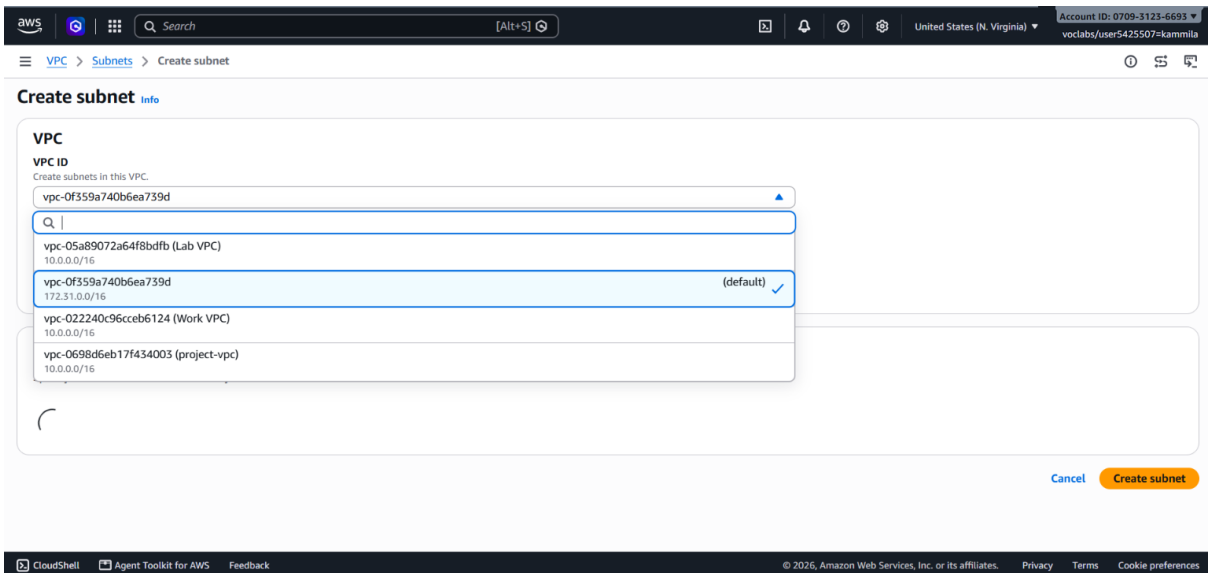

Step 5: Now this is VPC

- IPv4 CIDR 10.0.0.0/16
- 4 Subnets

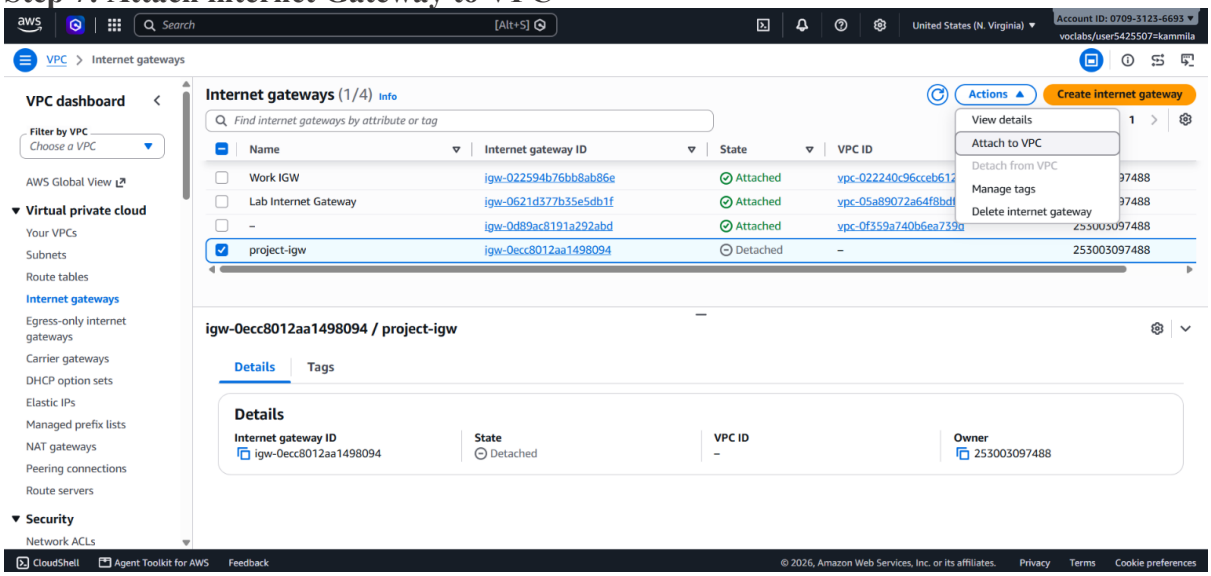

Step 6: Create a subnet

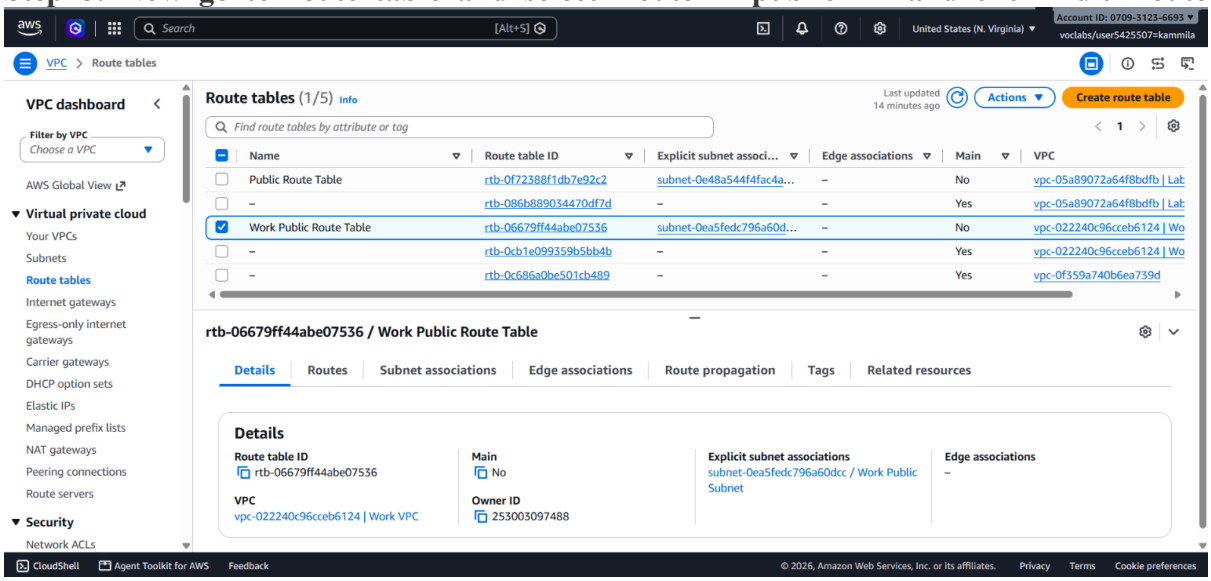

- Select your VPC

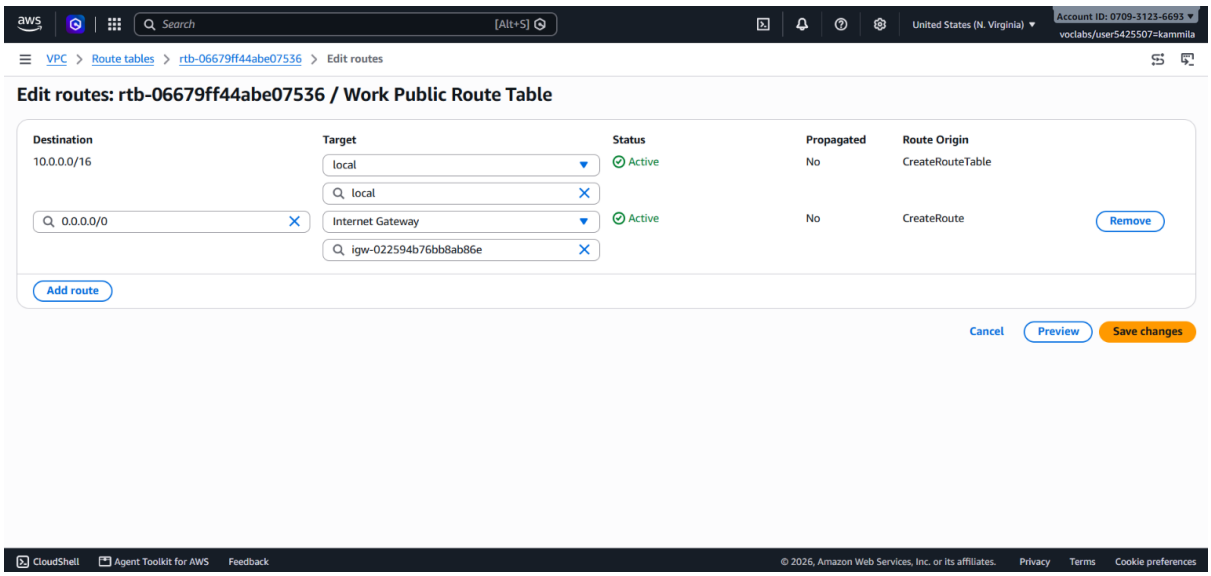

Step 7: Attach internet Gateway to VPC

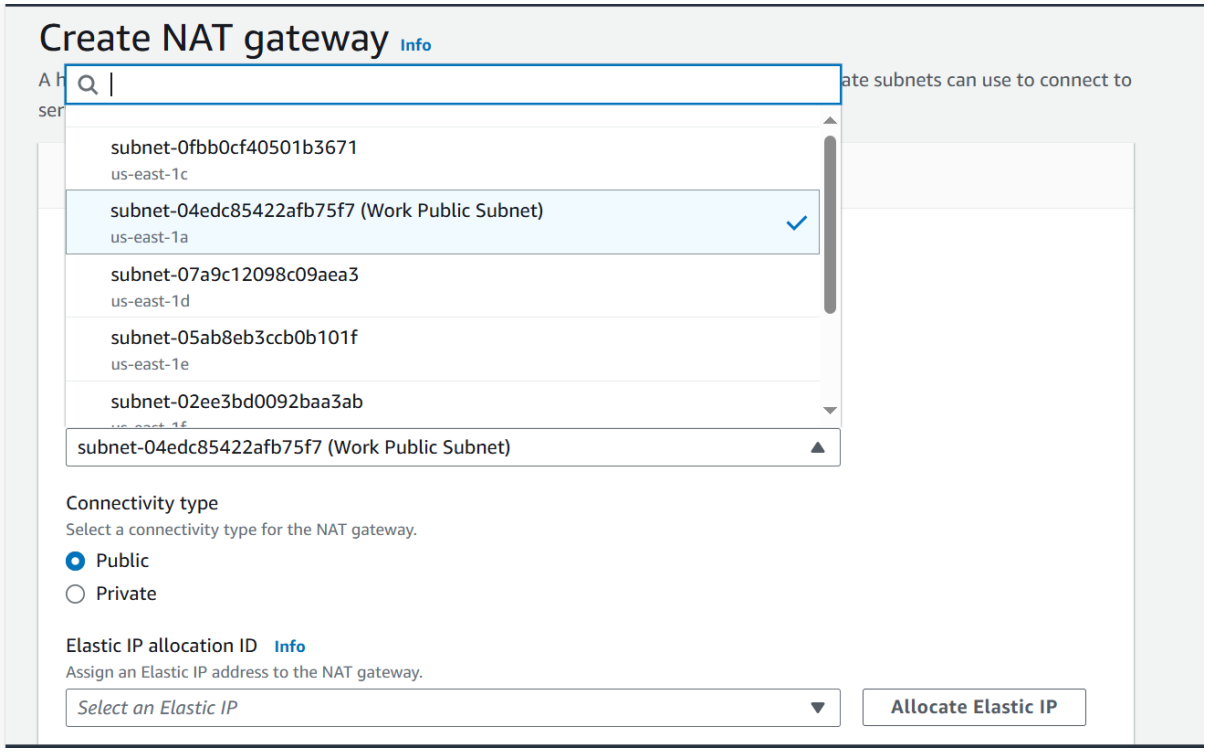

Step 8: Now go to route table and select Route in public-RT and click Edit Route

- **In destination write 0.0.0.0/0 and in target select the gateway which you created**

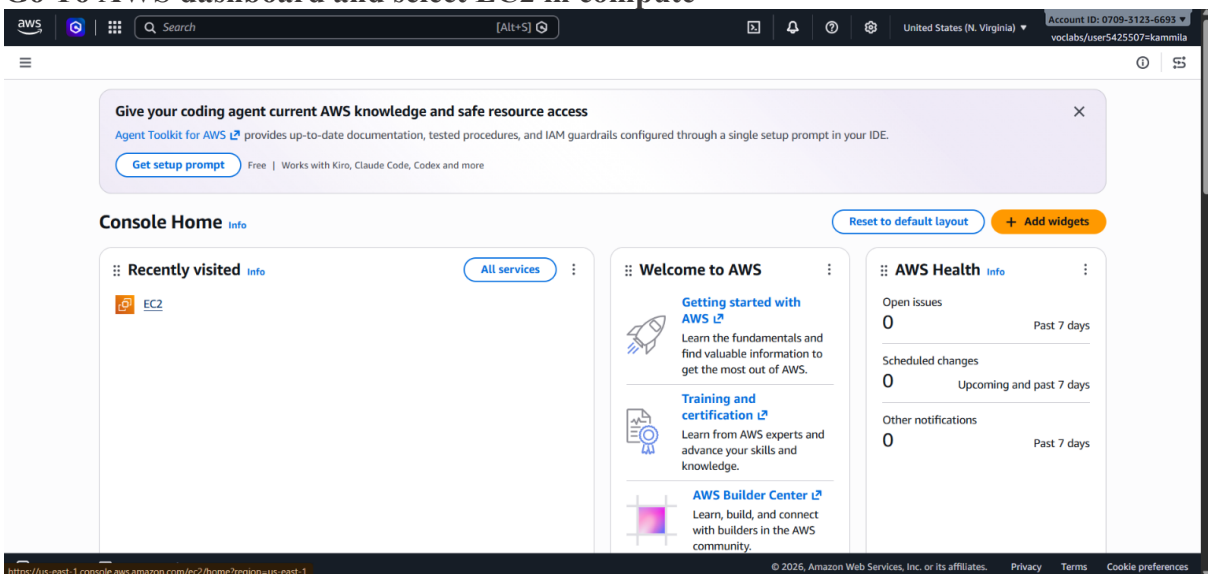

Step 9: NAT Gateway - Go to NAT Gateway and select option Create NAT Gateway - Select Subnet : Work public subnet

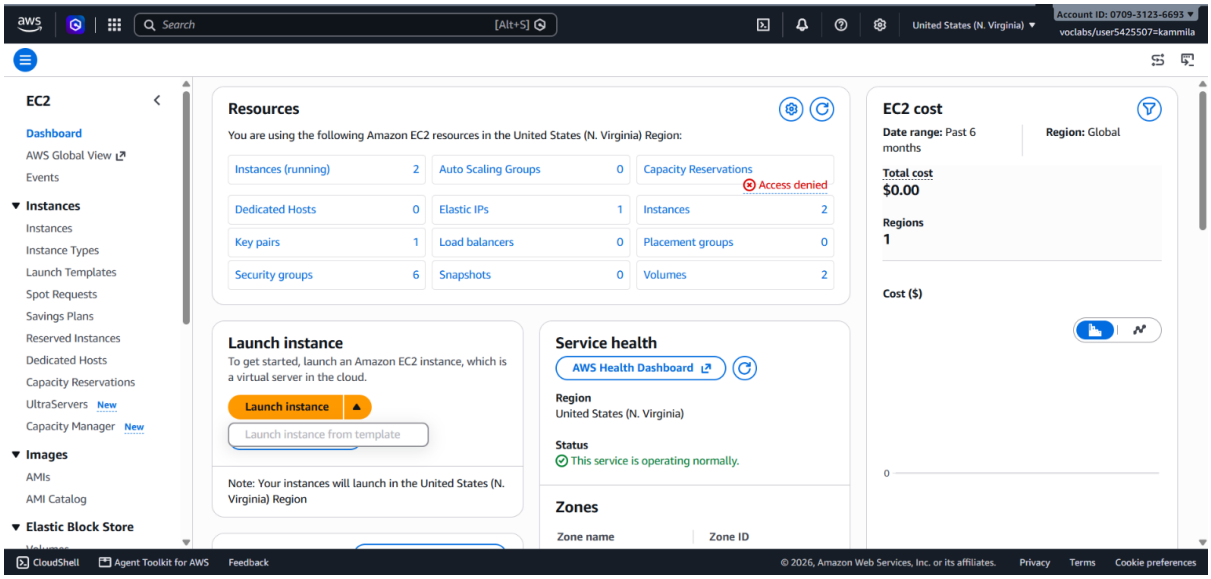

Step 10: Go to EC2 instance and create an instance, in Configure instance Details in Network select myVPC and subnet as private-a and rest process as Virtual machine creation.

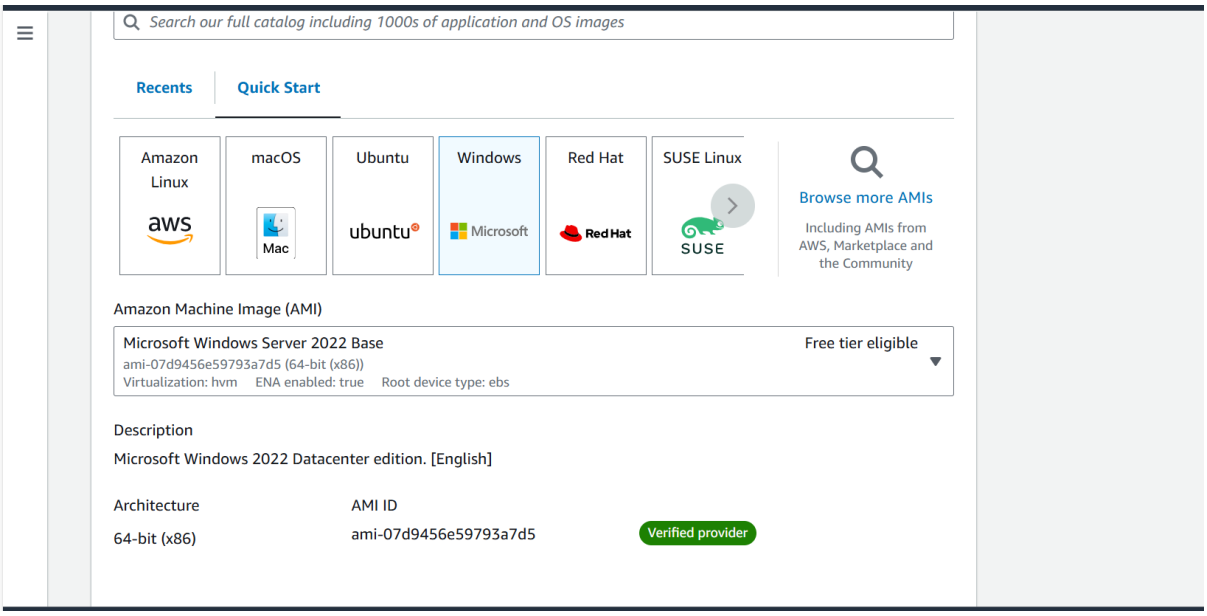

Go To AWS dashboard and select EC2 in compute

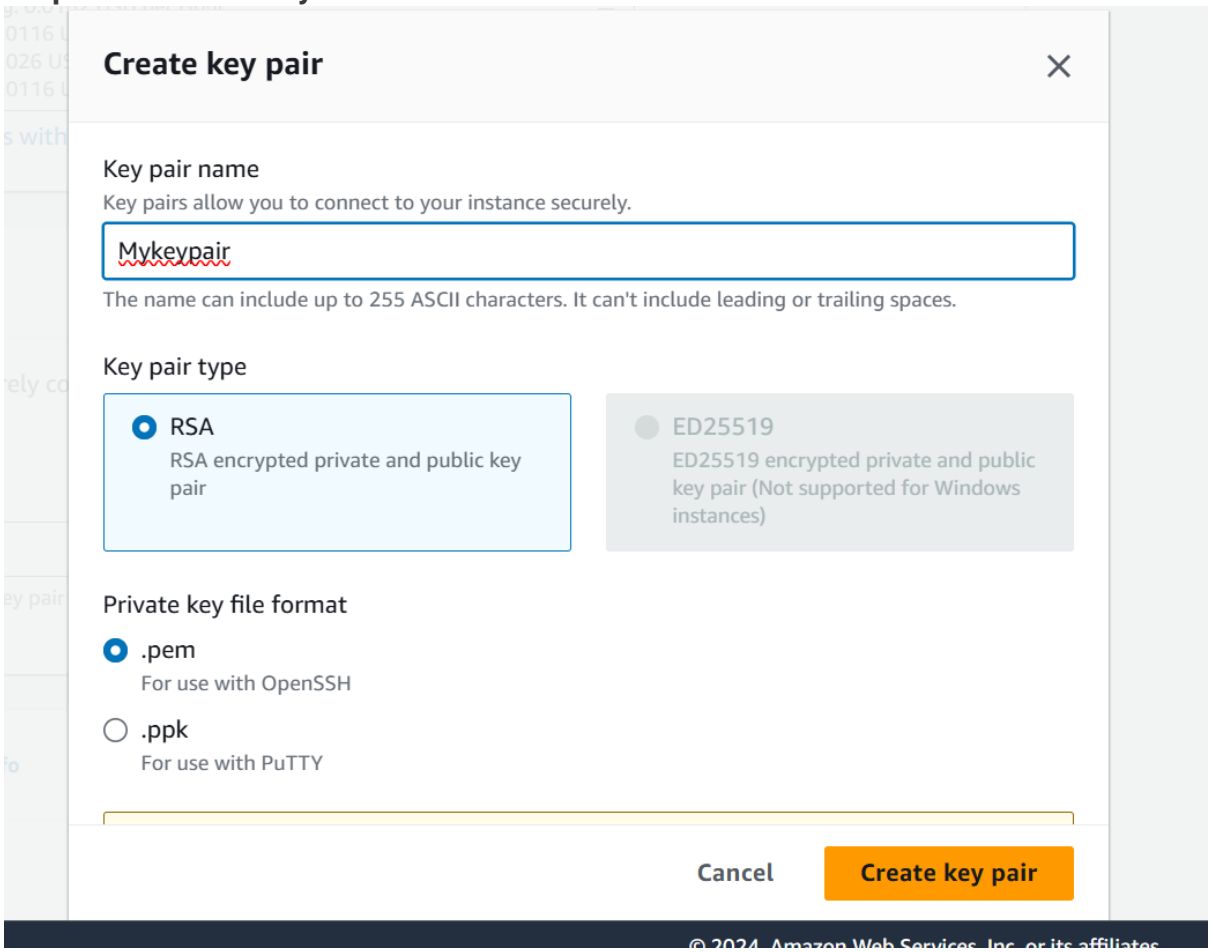

Step 11: Click Launch Instance

Step 12: Select Preferred OS

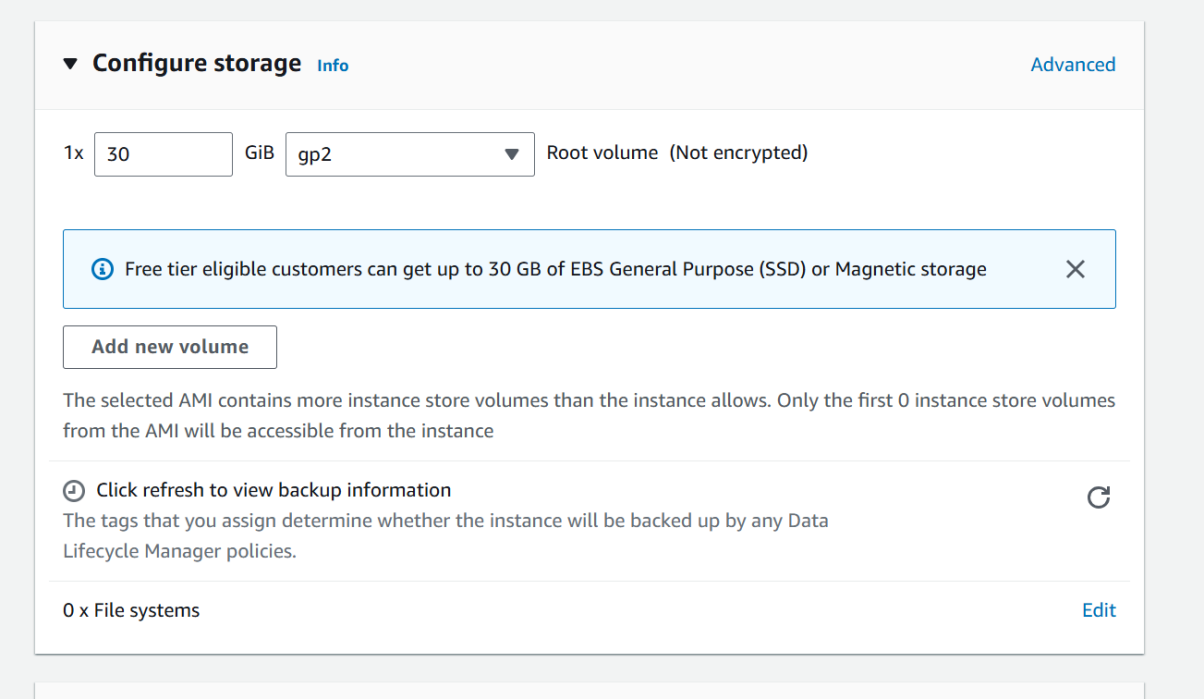

Step 13: Create a Key Pair

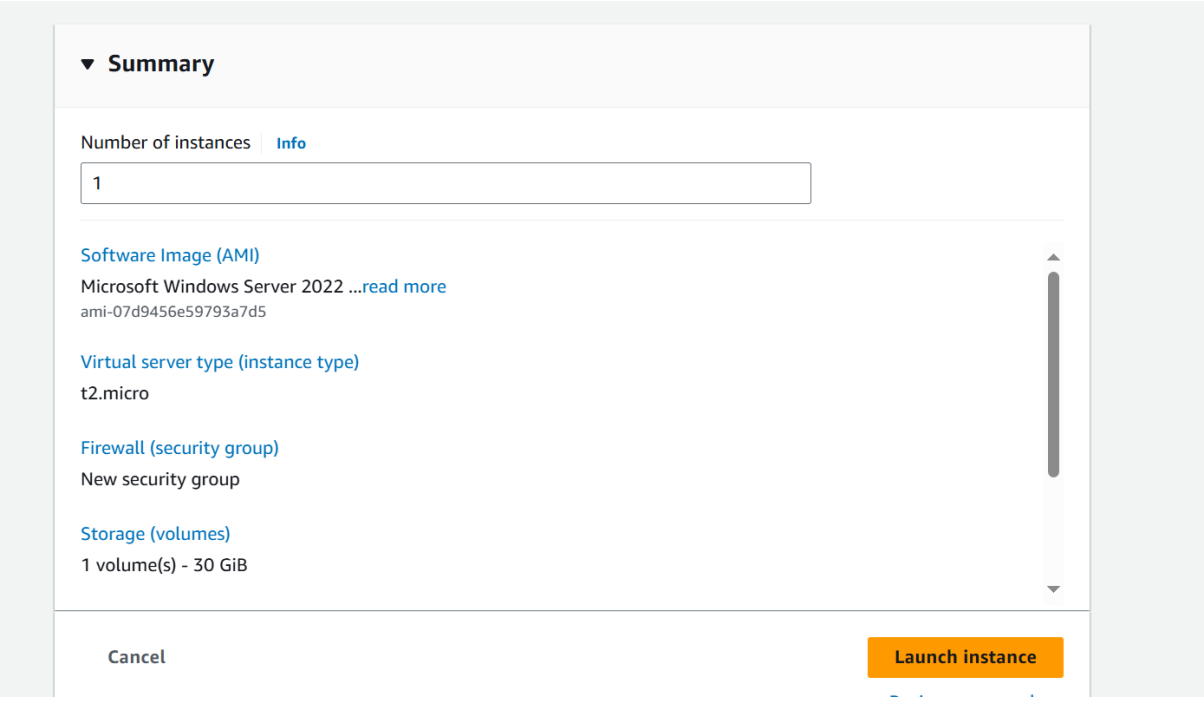

Step 14: Configure storage

- **No change needed keep as it is.**

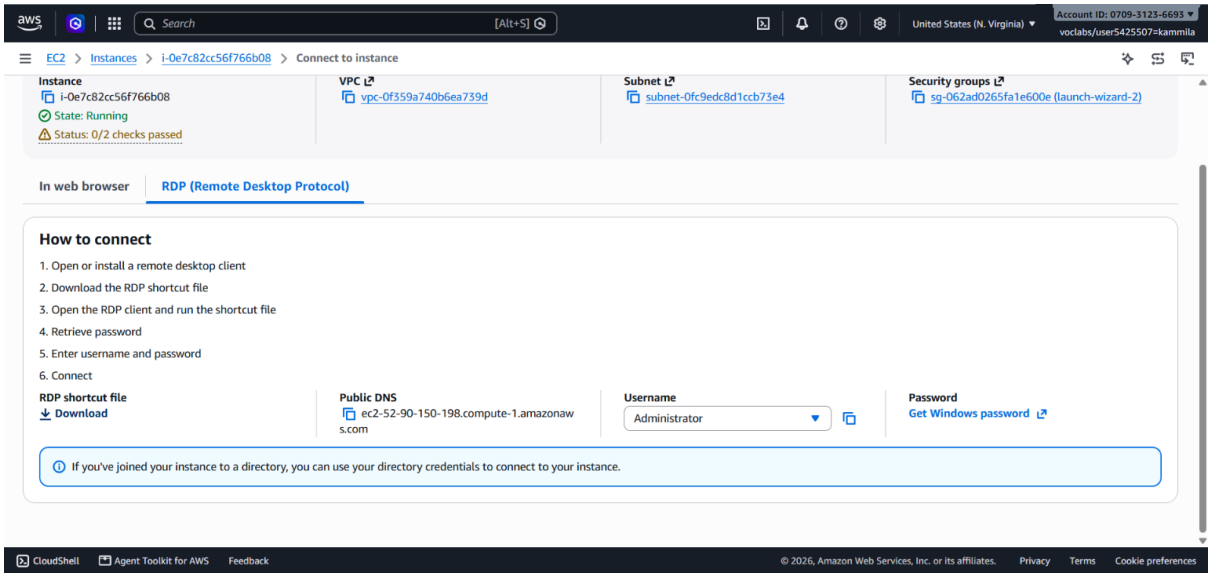

Step 15: Configure the instance

- **No change needed keep as it is, click launch.**

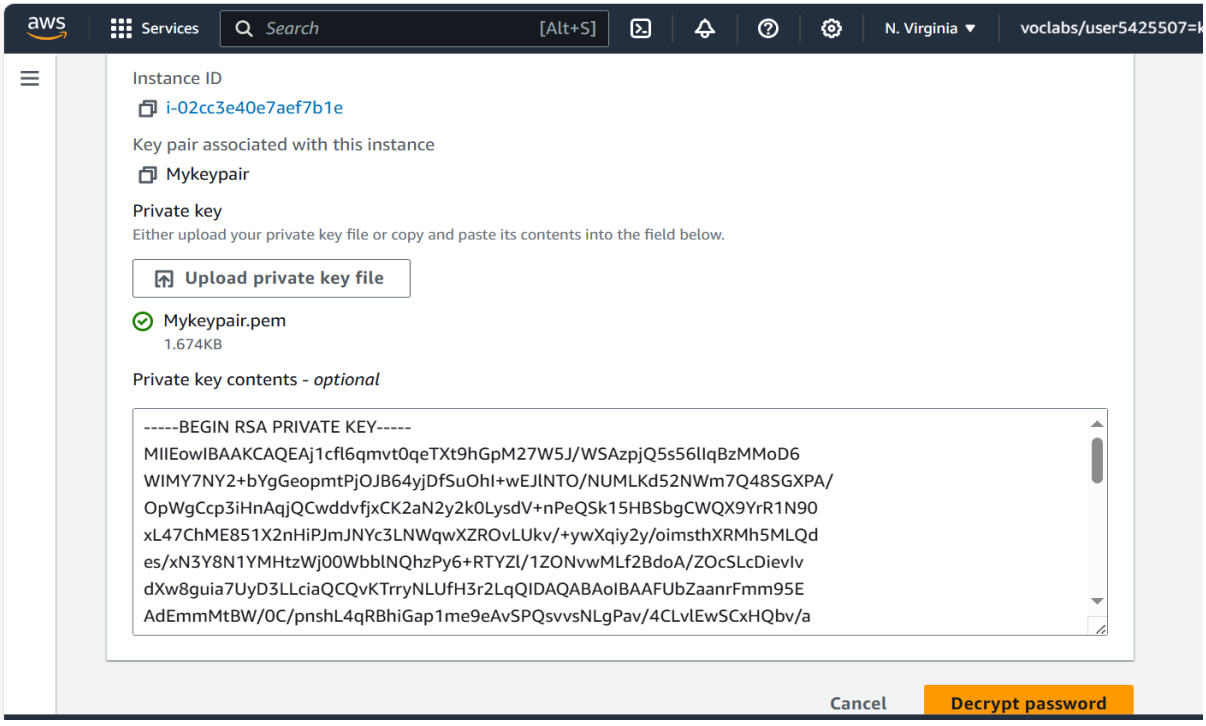

Step 16: Download Desktop Remote File

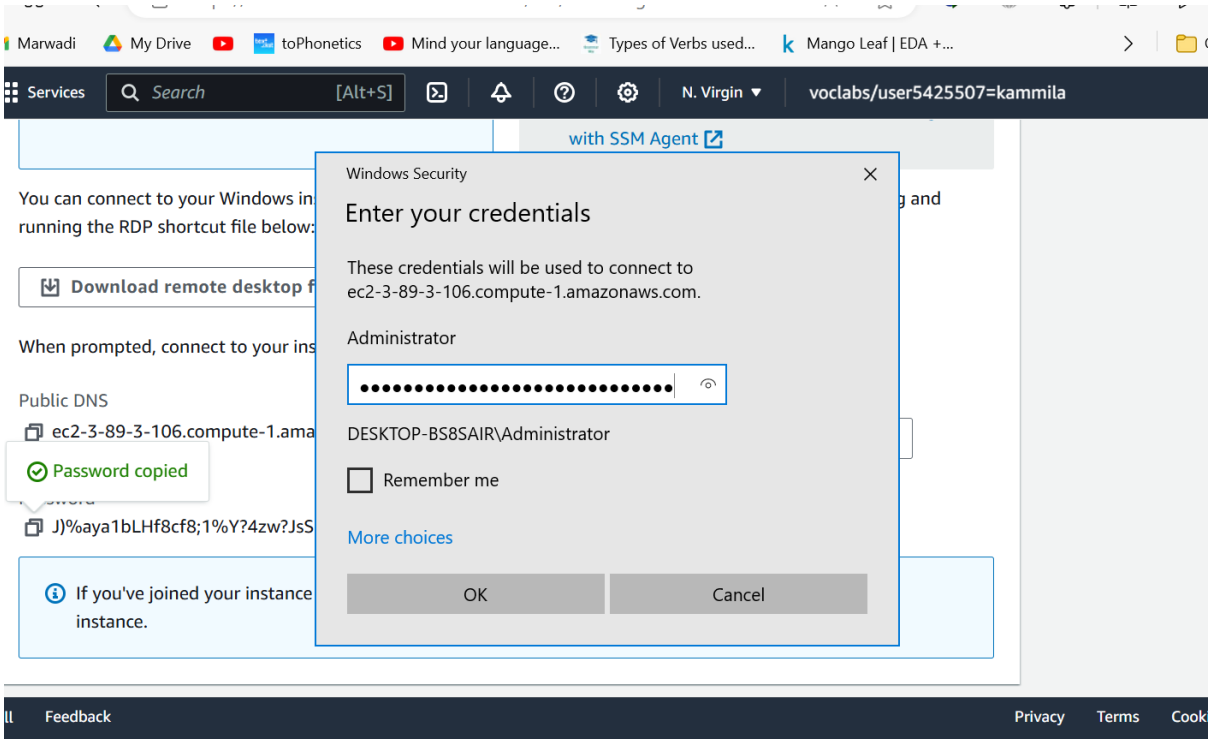

Step 17: Get Password

- **Upload Key Pair File And Decrypt The Password**

Step 18: Open the Remote Desktop File and Login Using the Password.

Step 19: Now Enjoy using your instance.
